Mini CTO Multi Operator Distribution Box Description

SJ-OTB-SY-05 New Compact Mini CTO Multi Operator Distribution Box / FttH Terminal Box is an intelligent solution to facilitate access between the operator's infrastructure and the internal network of buildings. So that FttH Terminal Box stands out as one single structure. The installation is performed modularly and independently by each operator based on the installation of one unit determined by the Secondary SJ-OTB-SY-05 belonging to the building and another unit belonging to the operator determined by the Primary SJ-OTB-SY-05. Mini CTO Multi Operator Distribution Box can be coupled together and therefore different operators may be connected to the building's internal network.

Mini CTO Multi Operator Distribution Box Characteristics

PRIMARY AND SECONDARY MODULE

Their modularity allows a connection between Primary and Secondary within both splitters.

The secondary module receives the riser cable of the building and the Primary Module receives the cable from the telecommunications operator

Mini CTO Multi Operator Distribution Box Compartments

The units are composed of two compartments, one for fusing fibers organized in cassettes and another compartment for the passage of connecting patch cords between the operator and client.

The compartments are separated by an SC / APC adapter module.

Depending on the SJ-OTB-SY-05 version, this module can have up to 32 SC / APC adapters.

Mini CTO Multi Operator Distribution Box Flexibility

The can have a multi-operator function, meaning that after the installation of Primary Operator A, a more independent form of one or more units of other operators may be installed.

Mini CTO Multi Operator Distribution Box Installation

The adapter panel is removable so that it can be easily mounted with adapters.

Both covers can be disassembled; the organizer cassettes open like a flipbook and can be removed at any time. Overall, the SJ-OTB-SY-05 is easy to install and is user friendly.
